

PARALLEL LINES

Don't assume that the lines are parallel unless they are marked.

Angles are the same because they are:

Don't forget that the angle sum of a triangle is 180°

$$a + b + c = 180^\circ$$

And the angles on a straight line add up to 180°

$$c + g + f = 180^\circ$$

Also the angles at a point add up to 360°

$$c + d + e + f + g = 360^\circ$$

Back to the comb:
